

CMS Activity

Risk Assessment - Resident input needed!

A Workshop Presented by Dr. Rosalind Schoof of Integral Consulting

Dr. Schoof, an internationally recognized expert on arsenic in the environment, will be evaluating potential health risks associated with exposure to Middleport soils as part of the CMS in the historic air deposition and Culvert 105 study areas.

Dr. Schoof will be conducting this study for FMC, and has prepared a document describing how the risk assessment will be performed.

Information about your regular activities on your residential property

in the CMS study area and your input on the methods proposed for the risk assessment are needed. You are invited to attend any of Dr.

Schoof's sessions to learn about the study and how you can participate

by providing information that will be used in the risk assessment, an important part of the

CMS that is underway. Dr. Schoof's session will be presented at four different times for your

convenience. (Note: the two Nov. 4 sessions will cover the general information presented at all sessions along with additional study details.)

Dr. Rosalind A. Schoof,
Ph.D., DABT

WHEN AND WHERE:

November 4 - 10 a.m. & 7 p.m.

Alternative Grounds Caffe, 17 Main St.

60-90 min. sessions will each provide an OVERVIEW AND SOME SPECIFICS about the study, and will describe what information is needed from residents in the study areas.

November 5 - 11 a.m. & 2 p.m.

FMC Neighborhood House, 17 Vernon St.

45-60 min. sessions will each provide a general OVERVIEW of the study, and will describe what information is needed from residents in the study areas.

WHO SHOULD ATTEND:

Middleport residents who live in the CMS study areas.
